

PRIVATE HOUSE - GAGGIO (MODENA)

AN INDEPENDENT HOUSE THAT COMBINES LARGE DIMENSIONS WITH GREAT FEATURES

For the construction of this private single-family house in Gaggio di Castelfranco Emilia (MO), it was decided to focus on a modern and elegant project, which would ensure maximum comfort in a safe environment with significant aesthetic value. In the construction of the supporting structure, on a 270 square meter plant, the Xlam system was used, ideal for guaranteeing significant energy savings and significant anti-seismic characteristics. The house, characterized by a single level with a loft portion, was then completed with a roof made of laminated wood.

PRODUCT SPECIFICATION

Single-family Residence

Localization: Castelfranco Emilia

Intended use: Detached or Duplex homes

Architetur and structural design:

Total area: 270ft

BUILDING SYSTEM

XLAM

Reasons for choosing the Xlam system

The Xlam system is a technical innovation in the construction of timber homes and buildings. The system's exceptional versatility allows the creation of a wide range of architectural constructions, including multi-storey timber buildings. The system assures optimal thermal insulation and a high level of fire resistance, a fast drying process and exceptional acoustic insulation.

About the Xlam system

The Xlam panel is composed of crossed layers bonded together, making the construction system extremely versatile. Composed of 99.4% timber and 0.6% adhesives, Xlam is considered to be a monolithic material capable of supporting very high loads and withstanding external stresses and seismic activity.
